

Guide to Writing a Letter of Appeal

If a health insurer refuses to pay a claim, the patient, an advocate, or a healthcare provider has the right to appeal the company's decision.

There are 2 types of appeals¹:

A request for an insurance company to conduct a full and fair review of its decision. If the case is urgent, the insurance company must speed up this process.

External review

A request for a review by an independent third party. External review means the insurance company no longer gets the final say over whether to pay a claim.

The process and requirements are different for each type of appeal. Visit <u>Healthcare.gov/appeal-insurance-company-decision/appeals</u> to learn more.

Use of this information does not guarantee that a health plan will provide coverage for DYSPORT and is not intended to be a substitute for, or an influence, on your independent medical judgment.

The following pages share tips for writing an effective Letter of Appeal and a template you can use to write your Letter of Appeal for individual patients.

Call 1-866-435-5677 Monday - Friday,
8:00 AM - 8:00 PM ET,
for additional information, or visit us online at IPSENCARES.com

Tips for Writing an Effective Letter of Appeal

Before you begin a Letter of Appeal, have the following information ready:

- Patient's full name and date of birth
- Patient's insurance policy/ID number
- The Explanation of Benefits (EOB) forms or letters showing what was denied
- (Case ID number
- Brief medical history, including diagnosis, ICD-10 code, comorbidities, and allergies
- Patient's current and prior therapeutic regimens (include start/stop dates and the reason[s] for discontinuation)
- Background on the patient's current condition and symptoms
- Clinical support for your recommendation

Consider these additional points when writing your letter for DYSPORT:

- Review the EOB and provide details for the criteria your patient meets or the rationale for excluding your patient from criteria they do not meet
- Clearly state why DYSPORT is the medically necessary choice for the patient
- **Provide clinical justification** to support your decision to prescribe DYSPORT and attach relevant clinical data, such as chart notes, laboratory test results, and pregnancy status¹
- Describe any other patient characteristics and/or clinical considerations relevant to DYSPORT therapy
 Attach clinical documentation that supports your recommendation¹

Be mindful of following preferred health plan processes and timing:

- Read the process for submitting the letter to ensure that you are meeting the requirements of the health plan and state guidelines, including how to submit the request (eg, fax, phone, email, health plan website)
 - Internal appeals must be submitted within 180 days (6 months) of receiving the denial notice from the health plan²
 - External reviews must be submitted within 4 months of receiving the denial notice from the health plan³
- Track the status of your request and follow up with the health plan if needed

IPSEN CARES can provide logistical information about submitting letters

Call 1-866-435-5677 Monday – Friday, 8:00 AM – 8:00 PM ET,

for additional information, or visit us online at IPSENCARES.com

Sample Letter of Appeal for DYSPORT

The image below shows the format for a sample Letter of Appeal for DYSPORT that uses a downloadable template. Take a look to get a sense of what a letter format may look like, and then you may download the template to customize it based on your medical opinion and your individual patient's needs.

This template is for informational purposes only, providing an outline of the types of information that may be required or helpful when responding to a request from a patient's health plan. Use of this information does not constitute medical or legal advice and does not guarantee reimbursement for coverage. It is not intended to be a substitute for, or an influence on, the independent clinical decision of the prescribing healthcare professional. IPSEN makes no representations or warranties about the template or its fitness for any specific use. IPSEN is not responsible for any changes made to the template document. All billing and coding decisions are the responsibility of the relevant physician.

INDICATIONS AND IMPORTANT SAFETY INFORMATION FOR DYSPORT

INDICATIONS

DYSPORT (abobotulinumtoxinA) for injection is indicated for the treatment of:

- spasticity in patients 2 years of age and older
- cervical dystonia in adults

IMPORTANT SAFETY INFORMATION

WARNING: DISTANT SPREAD OF TOXIN EFFECT

Postmarketing reports indicate that the effects of DYSPORT and all botulinum toxin products may spread from the area of injection to produce symptoms consistent with botulinum toxin effects. These may include asthenia, generalized muscle weakness, diplopia, blurred vision, ptosis, dysphagia, dysphonia, dysarthria, urinary incontinence and breathing difficulties. These symptoms have been reported hours to weeks after injection. Swallowing and breathing difficulties can be life threatening and there have been reports of death. The risk of symptoms is probably greatest in children treated for spasticity, but symptoms can also occur in adults treated for spasticity and other conditions, particularly in those patients who have underlying conditions that would predispose them to these symptoms. In unapproved uses and in approved indications, cases of spread of effect have been reported at doses comparable to or lower than the maximum recommended total dose.

Contraindications

DYSPORT is contraindicated in patients with known hypersensitivity to any botulinum toxin products, cow's milk protein, or to any of the components in the formulation, or infection at the proposed injection site(s). Serious hypersensitivity reactions including anaphylaxis, serum sickness, urticaria, soft tissue edema, and dyspnea have been reported. If such a serious reaction occurs, discontinue DYSPORT and institute appropriate medical therapy immediately.

Warnings and Precautions

Lack of Interchangeability Between Botulinum Toxin Products

The potency Units of DYSPORT are specific to the preparation and assay method utilized. They are not interchangeable with other preparations of botulinum toxin products and, therefore, units of biological activity of DYSPORT cannot be compared to or converted into units of any other botulinum toxin products assessed with any other specific assay method.

Dysphagia and Breathing Difficulties

Treatment with DYSPORT and other botulinum toxin products can result in swallowing or breathing difficulties. Patients with pre-existing swallowing or breathing difficulties may be more susceptible to these complications. In most cases, this is a consequence of weakening of muscles in the area of injection that are involved in breathing or swallowing.

When distant effects occur, additional respiratory muscles may be involved. Deaths as a complication of severe dysphagia have been reported after treatment with botulinum toxin. Dysphagia may persist for several weeks and require use of a feeding tube to maintain adequate nutrition and hydration. Aspiration may result from severe dysphagia and is a particular risk when treating patients in whom swallowing or respiratory function is already compromised. Treatment of cervical dystonia with botulinum toxins may weaken accessory muscles of ventilation, which may result in a critical loss of breathing capacity in patients with respiratory disorders who may have become dependent upon these muscles. Patients treated with botulinum toxin may require immediate medical attention should they develop problems with swallowing, speech, or respiratory disorders. These reactions can occur within hours to weeks after injection with botulinum toxin.

Pre-existing Neuromuscular Disorders

Individuals with peripheral motor neuropathic diseases, amyotrophic lateral sclerosis, or neuromuscular junction disorders (e.g., myasthenia gravis or Lambert-Eaton syndrome) should be monitored particularly closely when given botulinum toxin. Patients with neuromuscular disorders may be at increased risk of clinically significant effects including severe dysphagia and respiratory compromise from typical doses of DYSPORT.

INDICATION AND IMPORTANT SAFETY INFORMATION FOR DYSPORT

IMPORTANT SAFETY INFORMATION (continued) Warnings and Precautions (continued)

Human Albumin and Transmission of Viral Diseases

This product contains albumin, a derivative of human blood. Based on effective donor screening and product manufacturing processes, it carries an extremely remote risk for transmission of viral diseases and variant Creutzfeldt-Jakob disease (vCJD). There is a theoretical risk for transmission of Creutzfeldt-Jakob disease (CJD), but if that risk actually exists, the risk of transmission would also be considered extremely remote. No cases of transmission of viral diseases, vCJD, or CJD have ever been identified for licensed albumin or albumin contained in other licensed products.

Intradermal Immune Reaction

The possibility of an immune reaction when injected intradermally is unknown. The safety of DYSPORT for the treatment of hyperhidrosis has not been established. DYSPORT is approved only for intramuscular injection.

Pre-existing Conditions at the Injection Site

Caution should be exercised when DYSPORT is used where the targeted muscle shows excessive weakness or atrophy.

Adverse Reactions

- The most common adverse reactions (≥4%) in adults with upper limb spasticity include muscular weakness; in adults with lower limb spasticity (≥5%) include falls, muscular weakness, and pain in extremity
- The most common adverse reactions (≥10%) in pediatric patients with upper limb spasticity include upper respiratory tract infection and pharyngitis; in pediatric patients with lower limb spasticity include nasopharyngitis, cough, and pyrexia

 The most common adverse reactions (≥5%) in adults with cervical dystonia include muscular weakness, dysphagia, dry mouth, injection site discomfort, fatigue, headache, musculoskeletal pain, dysphonia, injection site pain, and eye disorders

Drug Interactions

Co-administration of DYSPORT and aminoglycosides or other agents interfering with neuromuscular transmission (e.g., curare-like agents) should only be performed with caution because the effect of the botulinum toxin may be potentiated. Use of anticholinergic drugs after administration of DYSPORT may potentiate systemic anticholinergic effects such as blurred vision. The effect of administering different botulinum neurotoxins at the same time or within several months of each other is unknown. Excessive weakness may be exacerbated by another administration of botulinum toxin prior to the resolution of the effects of a previously administered botulinum toxin. Excessive weakness may also be exaggerated by administration of a muscle relaxant before and after administration of DYSPORT.

To report SUSPECTED ADVERSE REACTIONS or product complaints, contact Ipsen at 1-855-463-5127. You may also report SUSPECTED ADVERSE REACTIONS to the FDA at 1-800-FDA-1088 or www.fda.gov/medwatch.
